- 7. Steel columns shall be raised or lowered to the correct levels off foundations/masonry supports using sawn steel packs not less than 75mm square. Allowance shall be made for nominal 25mm thickness of grout between column baseplates and foundations/masonry supports. Grout shall take the form of neat cement slurry with a nonshrink additive and should be just fluid enough to pour.
- 8. Site modifications to structural steelwork shall not be carried out unless prior approval has been obtained from the Engineer.
- 9. All structural steelwork shall be blast cleaned to BS EN ISO 8501-1, preparation grade SA 2 1/2 and, except where specified as galvanised, shall be painted with a suitable good quality high build epoxy zinc phosphate primer to provide a dry film thickness of not less than 80 microns. (e.g. Intumescent paint).
- 10. Steelwork specified as galvanised shall be blast cleaned as above & hot dip galvanised to BS EN ISO 1461 minimum coating thickness 85 microns. Corrosion category to be C3 BS EN ISO 12944-2.
- 11. All steelwork below DPC level or built within the masonry wall cavity shall additionally be site painted with a compatible high build epoxy 8. Lintels zinc phosphate primer to provide a dry film thickness of not less than 120 microns, to achieve an overall primer coating of 200 microns. i.e. LEIGHS PAINTS EPIGRIP C400 zinc phosphate primer/buildcoat or equal.
- 12. Steelwork below DPC and adjacent to soil shall be encased in concrete with cover of not less than 100mm. A reduced cover of 50mm will be permitted when cast against masonry or additional protection is provided. Concrete to be not weaker than C20/25 N/mm2 at 28 days to BS EN 206-1, BS 8500-1 and BS 8500-2.
